

# The inverse metric tensor in Riemann normal coordinates

Here we calculate the Riemann normal expansion of the inverse metric,  $g^{ab}$ , by developing the recursive sequences

$$g^{ab}{}_{,d\underline{e}} = -\left(g^{cb}\Gamma^a{}_{c(d),\underline{e}}\right) - \left(g^{ac}\Gamma^b{}_{c(d),\underline{e}}\right) \quad (1)$$

$$(n+3)\Gamma^a{}_{d(b,c\underline{e})} = (n+1)\left(R^a{}_{(bcd,\underline{e})} - \left(\Gamma^a{}_{f(c}\Gamma^f{}_{bd),\underline{e}}\right)\right) \quad (2)$$

for  $n = 1, 2, 3, \dots$ . Note in these equations that the (extended) index  $\underline{e}$  contains  $n$  normal indices.

We then construct a Taylor series for the metric using

$$\begin{aligned} g^{ab}(x) &= g^{ab} + g^{ab}{}_{,c}x^c + \frac{1}{2!}g^{ab}{}_{,cd}x^cx^d + \frac{1}{3!}g^{ab}{}_{,cde}x^cx^dx^e + \dots \\ &= g^{ab} + \sum_{n=1}^{\infty} \frac{1}{n!} g^{ab}{}_{,\underline{c}} x^{\underline{c}} \end{aligned}$$

## Stage 1: Symmetrised partial derivatives of $g^{ab}$

In this stage, equation (1) is used to express the symmetrised partial derivatives of the metric in terms of the symmetrised partial derivatives of the connection.

$$\begin{aligned} g^{ab}{}_{,c}A^c &= 0 \\ g^{ab}{}_{,cd}A^cA^d &= -g^{cb}\partial_e\Gamma^a{}_{cd}A^dA^e - g^{ac}\partial_e\Gamma^b{}_{cd}A^dA^e \\ g^{ab}{}_{,cde}A^cA^dA^e &= -g^{cb}\partial_{fe}\Gamma^a{}_{cd}A^dA^eA^f - g^{ac}\partial_{fe}\Gamma^b{}_{cd}A^dA^eA^f \end{aligned}$$

## Stage 2: Replace derivatives of $\Gamma$ with partial derivs of $R$

Now we use the results from `dGamma` to replace derivatives of  $\Gamma$  with partial derivatives of  $R$ . These were computed in `dGamma` using equation (2) above.

$$\begin{aligned}
g^{ab}{}_{,c}A^c &= 0 \\
g^{ab}{}_{,cd}A^cA^d &= -\frac{1}{3}g^{cb}A^dA^eR^a{}_{dec} - \frac{1}{3}g^{ac}A^dA^eR^b{}_{dec} \\
g^{ab}{}_{,cde}A^cA^dA^e &= -\frac{1}{2}g^{cb}A^eA^dA^f\partial_eR^a{}_{dfc} - \frac{1}{2}g^{ac}A^eA^dA^f\partial_eR^b{}_{dfc}
\end{aligned}$$

### Stage 3: Replace partial derivs of $R$ with covariant derivs of $R$

Next we use the results from `dRabcd` to replace the partial derivatives of  $R$  with covariant derivatives.

$$\begin{aligned}
g^{ab}{}_{,c}A^c &= 0 \\
g^{ab}{}_{,cd}A^cA^d &= -\frac{1}{3}A^cA^dR^a{}_{cd}{}^b - \frac{1}{3}A^cA^dR^b{}_{cd}{}^a \\
g^{ab}{}_{,cde}A^cA^dA^e &= -\frac{1}{2}g^{cb}A^dA^fA^e\nabla_dR_{cfe}g^{ag} - \frac{1}{2}g^{ac}A^dA^fA^e\nabla_dR_{cfe}g^{bg}
\end{aligned}$$

### Stage 4: Build the Taylor series for $g_{ab}$ , reformatting and output

Each of the above expressions constitutes one term in the Taylor series for the metric. We also make the trivial change  $A \rightarrow x$ . Then we do some trivial reformatting.

$$\begin{aligned}
g_{ab}(x) &= g^{ab} + g^{ab}{}_{,c}x^c + \frac{1}{2!}g^{ab}{}_{,cd}x^cx^d + \frac{1}{3!}g^{ab}{}_{,cde}x^cx^dx^e + \mathcal{O}(\epsilon^4) \\
&= g^{ab} + \frac{1}{3}x^cx^dR_{cedf}g^{ae}g^{bf} + \frac{1}{6}x^cx^dx^e\nabla_cR_{dfe}g^{af}g^{bg} + \mathcal{O}(\epsilon^4)
\end{aligned}$$
